### Skin protection:

#### Hand protection:

Wear suitable gloves. Chemical protection gloves are suitable, which are tested according to EN 374. For special purposes, it is recommended to check the resistance to chemicals of the protective gloves mentioned above together with the supplier of these gloves. The times are approximate values from measurements at 22 ° C and permanent contact. Increased temperatures due to heated substances, body heat etc. and a reduction of the effective layer thickness by stretching can lead to a considerable reduction of the breakthrough time. If in doubt, contact manufacturer. At an approx. 1.5 times larger / smaller layer thickness, the respective breakthrough time is doubled / halved. The data apply only to the pure substance. When transferred to substance mixtures, they may only be considered as a guide.

**Type of material** NBR (nitrile rubber)

**Material thickness** >0.11 mm

**Breakthrough time of the glove material** >480 minutes (permeation level: 6)

#### Body protection:

Do not wear contaminated work clothing outside the workplace. Contaminated clothing Wash immediately.

#### Other skin protection measures

Take rest periods to regenerate the skin. Preventive skin protection (protective creams/ointments) is recommended.

#### Respiratory protection

Respiratory protection is required for: Aerosol/mist formation. Type: A-P2 (combined filters against particles and organic gases and vapors, identification color brown/white. usually no personal Respiratory protection necessary.

Wear time limits in accordance with local rules for the use of Respiratory protective devices must be observed

#### Environmental exposure controls

Keep away from drains, surface and ground water.
